Progress Report 1

CSIS 4495 - Applied Research Project

Student: Anushka Kshirsagar || Reporting Period: Oct 6 - Oct 11, 2026

Work Date/Hours Logs

Date	Number of Hours	Description of work done
Oct 6, 2026	0.5	Reviewed the project proposal and noted the main information needed for the app.
Oct 7, 2026	1.0	Looked into Python, Streamlit and SQLite and how they can be used for our project.
Oct 7, 2026	1.0	Met with Jasleen and discussed the datasets and what information was missing.
Oct 11, 2026	1.0	Reviewed the final synthetic dataset and checked the product, sales, inventory and purchase order files.
Oct 11, 2026	1.0	Planned the first app flow: select a SKU, show sales, stock, incoming orders and forecast.
Oct 11, 2026	0.5	Reviewed the GitHub submission requirements and planned how I will upload my own work.
	Total: 5.0	

Summary Description of Work

This week, I started planning the technical side of our project. I reviewed our proposal and noted what the app needs. I also looked into Python, Streamlit and SQLite. Jasleen and I discussed the datasets and later checked the final synthetic dataset together. I reviewed how the product, sales, inventory and purchase order files connect. My next step is to set up the Python project and start a basic Streamlit page.

Repo Check-in of Implementation Completed

I will add this progress report under DocumentsAndReports. My next GitHub check-in will include the basic Streamlit app and the first data loading code under the Implementation folder.

AI Use Section

AI Tool Name	Version, Account Type	Specific use	My value addition
ChatGPT	GPT-5.6 Sol, Plus account	Used to understand software setup, data flow, app structure and GitHub organization.	I reviewed the project needs, checked the dataset with my partner and decided which steps fit our project.

Appendix: Prompt History

1. What software do I need to install for a Python, Streamlit and SQLite project?
2. Explain how Python, Streamlit, pandas, Plotly and SQLite can work together in our project.
3. What information should our dataset contain for sales forecasting and inventory planning?
4. Can a synthetic dataset be used for our project and what should we mention about it?
5. Explain how products, sales, inventory and purchase order files connect using SKU and warehouse.
6. Explain a simple app flow from selecting a product to showing a reorder recommendation.
8. What should the first basic Streamlit page contain?
9. Explain how a moving average can be used as a basic sales forecast.
10. Explain how to calculate projected inventory using stock, incoming orders and forecast demand.
11. How should the app handle several incoming shipments for the same SKU with different ETAs?
12. Explain in simple terms how a reorder date and order quantity can be calculated.
13. How can we test a scenario where an incoming shipment is delayed?
14. Suggest a simple GitHub folder structure for implementation, data and reports.
15. How can both team members make separate GitHub commits so individual work is visible?
16. What should we try to have working by the mid-course demo?
